## livestock and meat

245 PER CAPITA MEAT CONSUMPTION IN 1980 , CURRENT SERVICE RECORDS FLM 5-81  
July 1981

### PORK AND POULTRY MORE POPULAR IN 1980

Per capita meat consumption rose in most Western countries during 1980, while there were declines in many of the Asian and Oceanic nations. Forty-eight countries were reviewed for red meat consumption and 38 reviewed for poultry consumption.<sup>1/</sup> In major North and South American countries consumption of meat enjoyed a recovery from the depressed levels of 1979, while in most European countries the gradual increases in consumption of recent years continued. The United Kingdom, where recessionary pressures have dampened meat demand, was the notable exception to the European Community's (EC's) overall gains in per capita consumption. The USSR, Japan, and Australia reduced their 1980 meat consumption in response to feed shortages, slower economic growth, and drought conditions, respectively.

The changing patterns in meat consumption the past 5 or 10 years evolved even further in 1980 as less expensive pork and poultry continued to replace beef in many diets. This trend may abate somewhat in 1981 because per capita pork consumption is expected to fall in the United States, Canada, the USSR, and major pork consuming countries in Asia.

Per capita beef consumption declined widely last year outside of some Central and South American beef producing countries. Weaker economic conditions and higher feed costs explain the smaller use of beef. On a per capita basis, Japan and the EC consumed less beef in 1980 for the first time in 5 years while the United States and Canada both decreased their beef consumption.

In many countries pork was substituted for beef. The United States and the EC continued to show steadily higher pork consumption. However, in the USSR and Poland feed shortages forced hog slaughter weights down and restrained pork consumption in 1980. The Dominican Republic also suffered a decline following an effort to eradicate African Swine Fever in its hog population. Asia's largest per capita consumer of pork, Taiwan, also reduced consumption as swine producers adjusted to a 1979 oversupply situation.

Consumption of lamb, mutton, and goat meat continued almost unchanged in 1980. The United Kingdom led a slight increase in EC consumption of these meats. Australia's prolonged drought forced lamb and mutton consumption down in that country and Japan replaced its use of these meats in processing with more abundant pork.

<sup>1/</sup> In this publication "consumption" refers to a country's per capita meat consumption rather than that country's total meat consumption.

Poultry consumption enjoyed widespread gains with the United States, the EC, the USSR, and Japan all reporting higher demand for the fifth straight year. One of the few exceptions to this trend was Canada, where large supplies of pork and reduced targets for poultry production discouraged consumption of poultry meats. Hong Kong's use and imports of poultry fell, while Israel's consumption was lower because a reduction in government subsidies pushed poultry prices higher.

---
